Wind (mph)	Max	Average	Min	▲
Wind	21	7.47	0	
Gust Wind	29	1.87	0	
Sea Level Pressure (in)	Max	Average	Min	▼

Estimated Precipitation from June 22<sup>nd</sup> through June 29 according to this map here in northeast Ohio we have received about 1 inch of rain within the last week. There is a chance of rain in the coming days but nothing more than a 60% chance. We can use all the rain we can get.

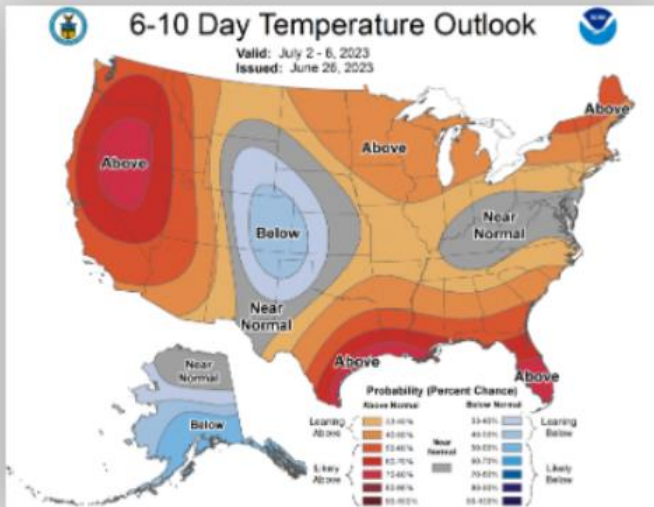

### Eastward Shift In Tornado Activity

Here are reported tornadoes in 2023 as of June 21st. It has been a relatively inactive season over the typical Plains tornado belt (purple circle) and more active over parts of the Midwest and Southeast (red circles).

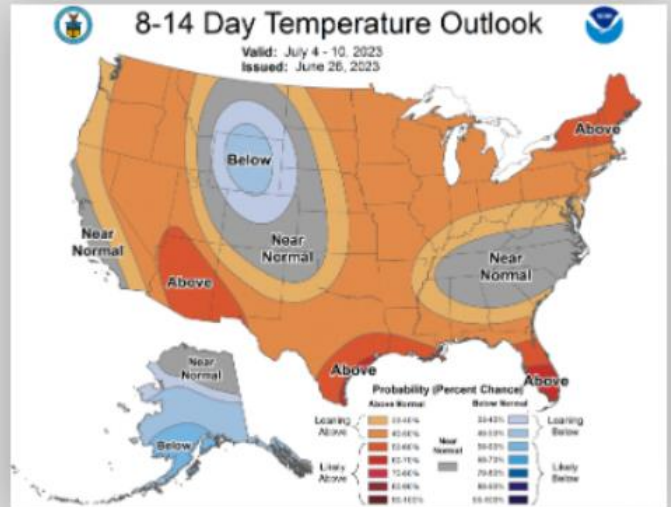

**Both temperature and precipitation outlook for the next 2 weeks.**

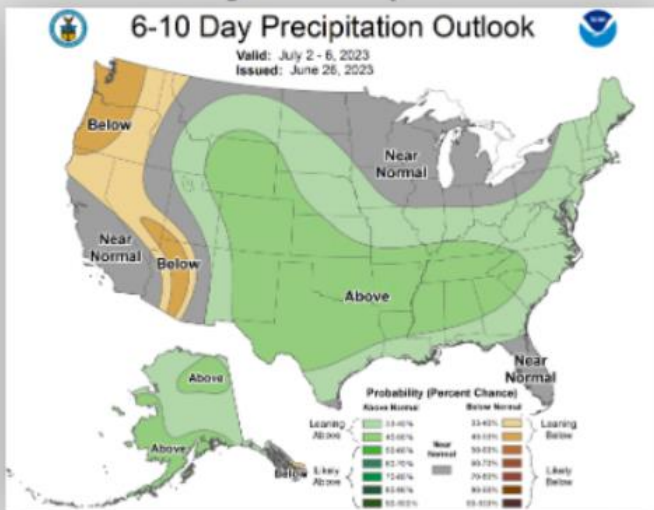

### 6 – 10 Day Temperature

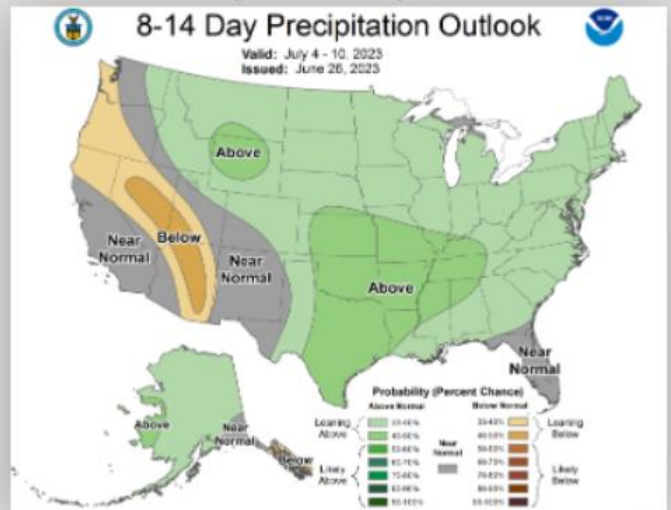

### 8 – 14 Day Temperature

### 6 – 10 Day Precipitation

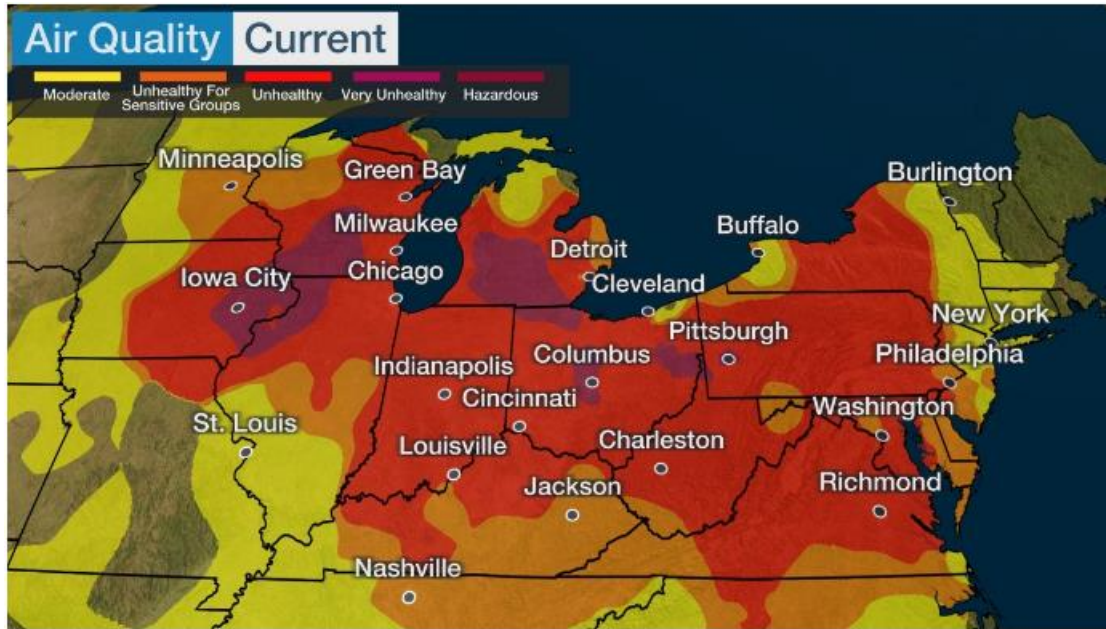

### 8 – 14 Day Precipitation

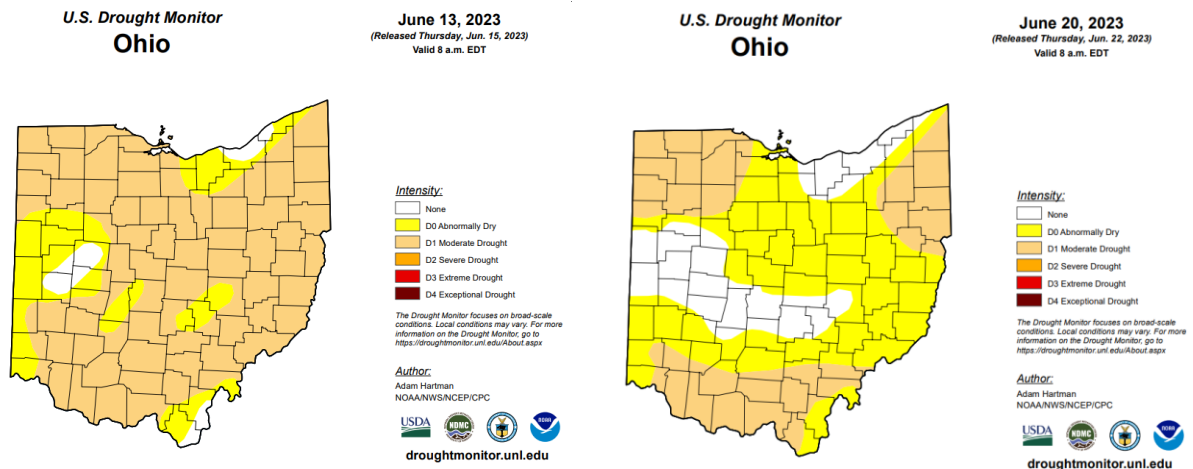

Based on the Maps above here at Schwartz farms, within the next 10-14 days our precipitation should remain near normal compared to other years. The temperature however, looks to be leaning above average.

The past couple days has been noticeably hazy in the air. The smoke from the Canadian wildfires has been moving south into our area. The rain in the forecast should help resolve the haziness and poor air quality that we have been experiencing.

### Side-by-side comparison of the U.S. Drought monitor:

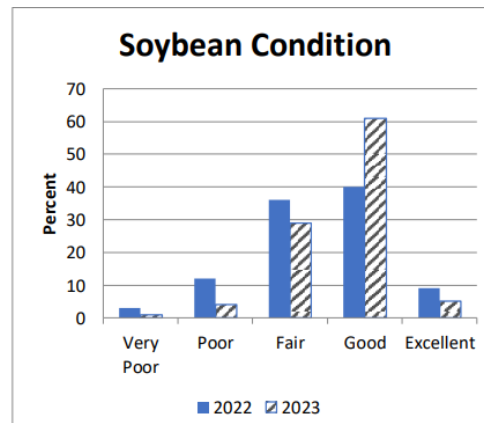

Above you can see the amount of moderate drought conditions in Ohio significantly decreased since June 13<sup>th</sup> to just abnormally dry conditions. This is thanks to the rain that we have been receiving, it has significantly reduced the drought conditions throughout the state of Ohio.

## Replant Update:

Schwartz Farms has had 3 growers total replant soybeans for a variety of reasons. One of our growers in Pennsylvania had to replant 100 acres due to slugs and poor stands because of the dry weather. Another grower in Pennsylvania had to replant 35 acres due to dry weather and poor stands. A grower in western Ohio replanted 600 acres due to frost damage on the beans he planted in early April. He had very poor stands due to the dry weather we had experienced in the end of May/beginning of June. This same grower called recently and is now worried about his replants because he has received 7 inches of rain and they are flooded. These are very abnormal circumstances; no other growers are experiencing these same things. Where he is located in western Ohio has received multiple storms pass through with significant amounts of rainfall. We had heard from our grower in New York that it looked like he had the best stands he has experienced, and that the beans look to be doing really well.

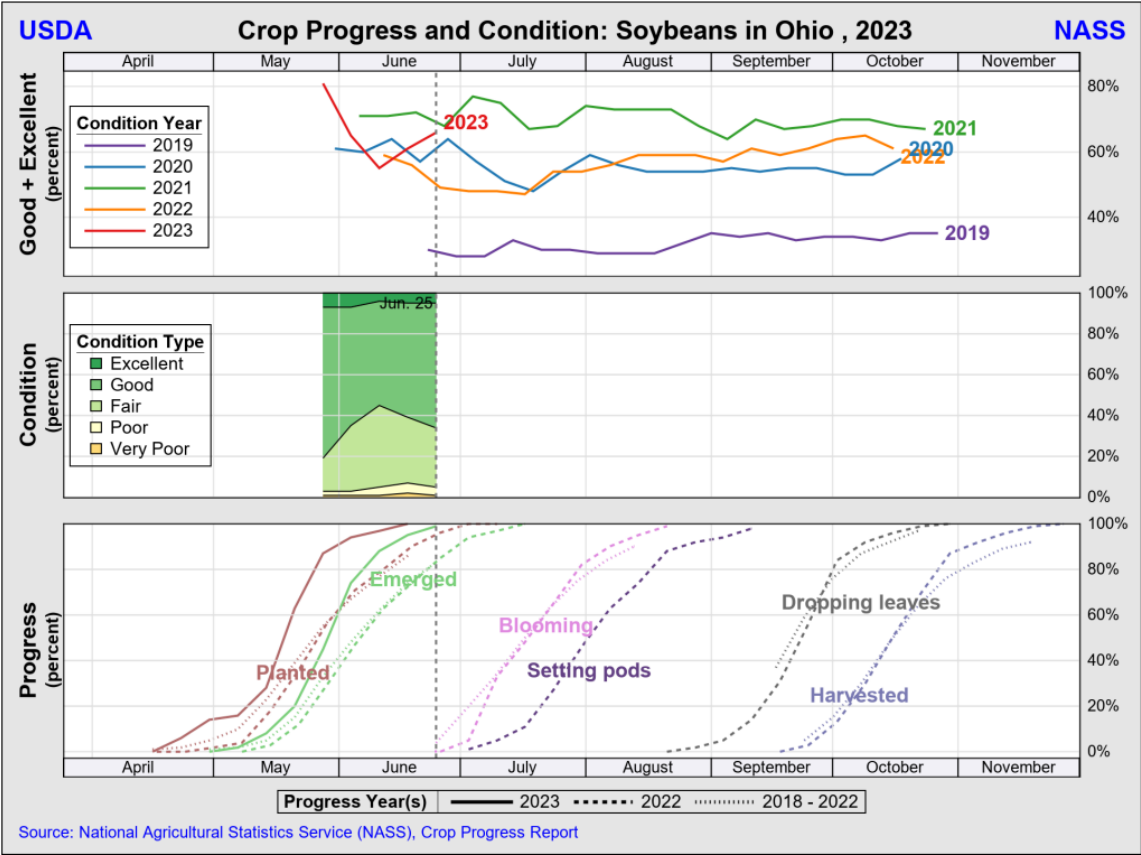

## Crop Conditions Update:

Crop Condition: Week Ending 06/25/23					
Crop	Very poor	Poor	Fair	Good	Excellent
	(percent)	(percent)	(percent)	(percent)	(percent)
Corn .....	1	3	30	61	5
Soybeans .....	1	4	29	61	5
Winter Wheat .....	0	5	35	53	7
Oats .....	0	2	31	66	1
Pasture and Range ....	1	9	36	53	1

Both corn and soybean conditions were each 66% good to excellent across the state of Ohio, which is an increase from our last report. Generally, all crops are reacting positively to the Rain we have been receiving, which is allowing for the rating to continue to increase as the weeks go on. As of Sunday June 27<sup>th</sup>, 96% of soybeans were emerged across the country.

### Schwartz Farm Update

Schwartz Farms is expecting to be harvesting wheat within the next week to week and a half. Tom Schwartz and others have been working on servicing the equipment to ensure the wheat harvest goes smoothly.

The Hartford Orchard is opening on July 14<sup>th</sup>, 2023. Many hours of work and preparation are going into the opening of the orchard in just a few days.

Crop Report as of June 30, 2023

Sam Schwartz has been working on spraying post application herbicide to all Schwartz Farms' corn and soybean Fields.

Crop Report as of June 30, 2023

The sweet corn growing next to the farm is Growing really well!
